Art Unit: 3737

## **DETAILED ACTION**

## Claim Objections

Claim 18 is objected to because of the following informalities: claim 18 is dependent on claim 18 as presently written. Appropriate correction is required. For purposes of art application, the claim is construed by examiner to be dependent on claim 13.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 7-9, and 11-13, are rejected under 35 U.S.C. 102(e) as being anticipated by Von Behren et al. (U.S. 6,558,324 B1) hereinafter "Von Behren".

Von Behren teach a system and method for strain image display including an initial B-mode scan (fig. 3) along with respective frame registration (element 123) wherein a form image (displacement estimation 124) is provided; an elasticity image (elasticity estimation 125) is provided; reconstruction (remapping 129) is performed and subsequent images are processed and superimposed (overlay generation 131). Von Behren further teach selective transmitting and receiving (elements 138 and 160) and wherein a user can select a particular frame for display (col. 3 line 40) and wherein both or one of the parameters relating to form and/or elasticity are displayed (claim 24).

Art Unit: 3737

Von Behren further teach that by varying the phasing, amplitude, and timing of the driving signals, the ultrasonic waves from the respective array elements are formed in to a transmit beam (element 144) providing for either a form image or elasticity image based on the varied amplitude.

Von Behren further teach a processing system (element 120) adapted to set, adjust, and monitor the operating parameters of a transmission control circuit (element 138) which accordingly generates and applies electrical control and driving signals to an ultrasonic probe to generated image data representing forma image and elasticity image.

## Allowable Subject Matter

Claims 5, 6, 10, and 14-20, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not teach nor fairly suggest distinct processing and filtering elements associated with the form image generating means and the elasticity image generating means and furthermore does not specifically teach wherein a method is provided to selectively switch from a form image mode to an elasticity image mode and controlling so as to selectively acquire the form image and the elasticity image in the measurement period of the elasticity image mode through varied amplitudes of transmission and distinct processing elements for each mode (form image and elasticity image).

Application/Control Number: 10/532,707

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to NASIR SHAHRESTANI whose telephone number is (571)270-

1031. The examiner can normally be reached on Mon.-Thurs: 7:30-5:00, 2nd Friday: 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Brian Casler can be reached on 571-272-4956. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
